High-Tech Security Features

Page Last Modified: 09/26/2017

- Describe how you intend to use Smart Schools funds to install high-tech security features in school buildings and on school campuses.**

The Devereux Red Hook School residential campus intends to utilize its Smart Schools allocation to improve overall school campus security by installing an access control system to its main entryways throughout school campus buildings. This will entail the installation and updating of entryway doors and hardware to integrate with an access control system across campus. This system would provide staff with an access card to buildings/areas relevant to their job role. It would also provide Devereux with a system to manage access for its employees remotely as roles and access needs change. We also plan to include the installation of a video intercom system to allow for monitoring and granting entry to visitors remotely for our campus programs. The Red Hook Campus currently uses a lock and key system and a Devereux employee needs to manually grant access to visitors. In a security or emergency situation this would place the employee at risk being in proximity to potential intruders. By installing these upgrades Devereux will increase security to its residential school campus, improve staff access to buildings as well as eliminate risks posed by lost, misplaced or non-returned keys when an employee leaves the agency.
